DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the plurality of loops (claim 9) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1, 2, 3/1 and 3/2, 4-8, 10-19 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller (USPN 4,932,705) as previously applied.

Regarding claims 1, 4-6, 15, 18, 19, Figure 1 of Miller shows a flexible tailgate 1 corresponding to the recited net. The flexible sheet includes slits 20 that are considered to provide holes and thereby a mesh structure to the tailgate. Also, see column 2, lines 16-39. Slits 20 provide the recited holes with a continuous outer edge where the top outer edge of the hole is coincident with the top of flap 16. Regarding the area ratio of holes to foil of 3:1 or more, Miller provides a tailgate that has free air flow. One of ordinary skill would realize that the area ratio would directly affect air flow. Discovering an optimum value of a result effective variable has been held to be within the capabilities of the person of ordinary skill in the art. It would have been obvious to one of ordinary skill in the art, by routine experimentation, to provide Miller with any reasonable area ratio, including the recited 3:1 or more, in order to obtain optimum air flow.

Regarding claim 2, Figure 1 further shows indicia 23 printed on the sheet. Also, see column 2, lines 37-39.

Regarding claims 3/1, 3/2 and 29, although Figure 1 shows rectangular holes, it would have been an obvious matter of design choice to make the Miller holes essentially square, since such a modification would have involved a mere change in the shape of a component. A change in shape is generally recognized as being within the level of ordinary skill in the art.

Regarding claim 7, corner straps 5,6,7,8 correspond to the recited fixing means.

Regarding claims 8 and 10, the arcuate reinforcements 27,28 correspond to the recited loop.

Regarding claim 11, buckles 31 correspond to the recited lugs.

Regarding claim 12, it would have been obvious to one of ordinary skill in the art to make the Miller tailgate from plastic in view of the universal use of plastic in today's technology.

Regarding claims 13 and 14, as Miller require the material to a substantially inelastic flexible sheet of membrane material, the specific type of material is not deemed to be critical but whose selection would have been obvious to one of ordinary skill in the art so long as it is capable of withstanding the recognized tailgate stresses.

Regarding claims 16 and 17, Miller preprints the indicia and the holes are cut. See column 2, lines 37-38.

Regarding claims 24-28, the Miller tailgate is considered to be inherently capable of being used as a sports net.

Allowable Subject Matter

4. Claims 9/7, 9/8 and 20-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
